

Cover Letter

Dear Hiring Manager,

I am excited to apply for the Senior Node.js Developer position at Bevatel. With hands-on experience in building scalable, high-performance web applications using Node.js, Fastify, PostgreSQL, and MongoDB, I have developed full-stack solutions that include React and Angular interfaces, AI-powered reporting, and production-ready backend services.

In my recent project, **"Faltarah System"**, I led the development of a multi-company management platform, integrating AI-based natural language reporting, enabling managers to retrieve structured insights from databases efficiently. Additionally, I have built corporate websites and responsive web applications that demonstrate my expertise in RESTful APIs, authentication (JWT/OAuth2), CI/CD pipelines, and secure coding practices.

My training through the **ITI MERN Stack Scholarship** and multiple freelance projects have strengthened my technical proficiency, teamwork, and problem-solving skills. I am confident in collaborating with cross-functional teams to deliver robust, scalable backend solutions while following best practices in performance, security, and DevOps workflows.

I am enthusiastic about contributing to Bevatel's innovative cloud-based contact center systems and AI-powered solutions. I look forward to the opportunity to discuss how my skills and experience align with your team's goals.

Thank you for considering my application.

Best regards,

Anas Ali Abdelmoneim El Gebaly
